Built-in reporting tools	Makes analyzing fax usage data straight forward.
Fax Delivery Confirmation	Real-time fax status confirms fax delivery results.
Technical Support	Includes 30 days support. Available: support plans/ professional services.

Product Highlights

Include Fax Machines

NET SatisFAXtion enables you to completely link and integrate fax machines to your fax server for total fax-machine to fax-server interoperability. Now you can track, archive and configure fax rules for your fax machines just like desktop fax.

Fax from the Desktop

NET SatisFAXtion adds a "Fax" button to the Microsoft Outlook and Office suite tool bars making it easy to send, create coversheets, and address faxes right from the desktop. Don't use Microsoft products? NET SatisFAXtion can fax from any email client and any application.

Flexible Inbound Fax Routing

Receive your faxes where you want: route faxes to individual or multiple recipients, departments, databases or printers using inbound routing. NET SatisFAXtion supports DID routing via digital DNIS or analog DTMF tones in addition to CallerID, port and manual fax routing.

HIPAA and SOX Regulatory Compliance

NET SatisFAXtion integrates with document management systems for complete fax archival and can use HTTPS encryption and the real-time T.38 fax protocol for secure fax

transmission over the open Internet when used in conjunction with a FaxBack certified VoIP provider.

Advanced Reporting Tools

The built-in Report Generator allows for easy graphical and numeric monitoring of all aspects of faxing including: fax server traffic volumes, total fax usage by date range, group or individual user, fax volume peaks, billable fax tracking, and much more. All reports are customizable and exportable to Excel.

Easy Installation and Support

NET SatisFAXtion installation is intuitive and user friendly and includes complete web based documentation and thirty days customer support to facilitate getting your fax server up and faxing as quickly as possible.

Administration and Management Console

The Administration console is a complete fax server management suite that gives administrators unparalleled information and control including: view and manage faxes, run usage reports, Auto-enroll or import and set up users and groups, install fax toolbars, manage global coversheets, setup fax dialing and validation rules, and much more.

Featured VoIP Media Gateway Solution:

The AudioCodes Mediant 1000 combines the VoIP Media Gateway and fax server into a single, high density, flexible rack mounted solution. Allows T1 (digital) and FXO, FXS and analog/T1 lines and integrates fax machines into the IP fax environment.

System Requirements

2GHz or higher Intel dual-core compatible processor

2GB RAM, 60GB Hard Drive, 10,000 RPM, RAID 0 Hard Drive Configuration
