

# NET SatisFAXtion Fax Machine Client

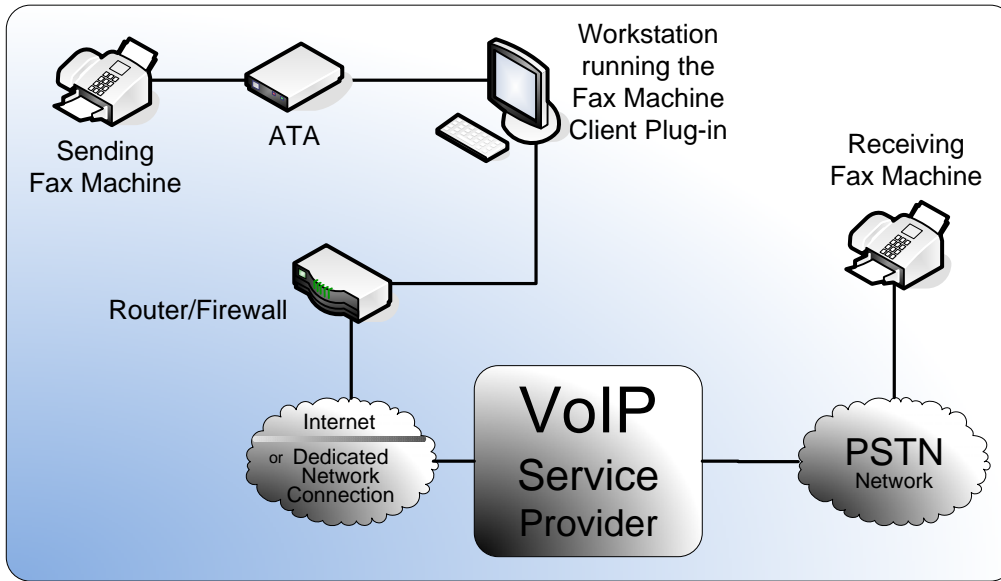

## Quickly and Easily Migrate Fax Machines from Analog Phone Lines to a VoIP Service Provider

Send and receive fax documents at the same low-cost rate and convenience as a VoIP phone call

Despite the evolution of fax software technology, many businesses still use **Fax Machines** to send and receive paper based documents in their organization. Unfortunately, as businesses migrate from analog phone lines to a VoIP service provider infrastructure, linking fax machines to the IP infrastructure has proven to be a challenge, commonly causing them to lose fax reliability. In some cases, Service Providers do not support fax machines altogether, forcing them to continue using dedicated analog phone lines for the fax machine.

The **NET SatisFAXtion™ IP Fax Machine Client Plug-in**, allows organizations of all sizes to quickly and easily link existing fax machines, MFP's, and digital senders to a NET SatisFAXtion equipped VoIP Service Provider infrastructure, without sacrificing reliable fax delivery. Using a supplied ATA device and the NET SatisFAXtion software plug-in, fax machines are easily connected to the VoIP service provider, bypassing the need for dedicated analog phone lines, redundant fax software, expensive fax board hardware or dedicated fax servers. This allows all documents, whether paper-based or printed from the workstation, to be faxed at the same low-cost rate and convenience as a VoIP phone call. This allows businesses to truly have a complete VoIP solution for all their communication needs.

### Features

- Integrates Fax Machines directly with the NET SatisFAXtion fax server - enabling the complete archival and logging of all sent and received faxes
- Fax paper based documents through the same VoIP Service Provider as your phone calls
- Reliable and secure faxing from a fax machine over the Internet to your VoIP provider
- Facilities HIPAA and SOX compliance
- Reduces faxing costs by using cost effective VoIP Service Providers for all businesses faxing needs
- Fax machine complements easy "Print to Fax" submission from all Windows applications; integrates desktop faxing with existing fax machines
- Faxes can be sent or received on the same VoIP infrastructure as voice calls, without forfeiting quality or experiencing latency
- Reliably send faxes through a VoIP Service Provider with HTTP(S) protocols
- Quick and easy installation of the ATA and software plug-in and connection to the VoIP provider's server
- Minimal user learning curve for quick and easy transition to VoIP faxing

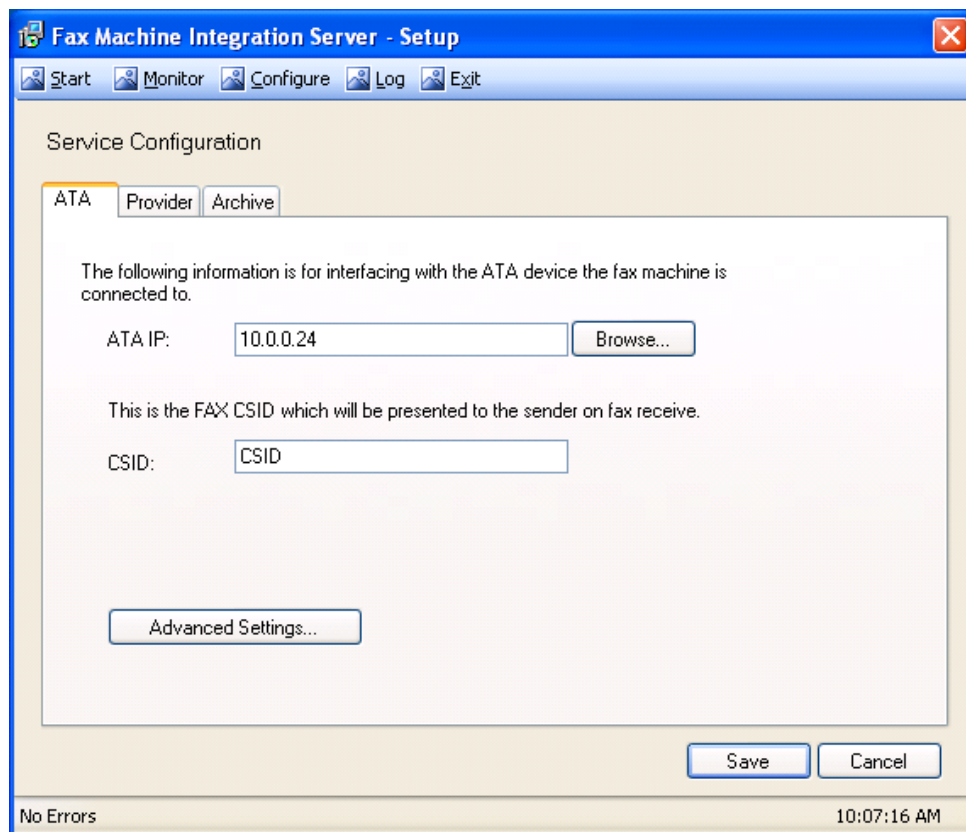

# NET SatisFAXtion IP for Service Providers: Fax Machine Client Plug-in

## With the NET SatisFAXtion Fax Machine Client Plug-in:

- Retain the ability to reliably fax paper-based documents
- Simple and Quick Installation
- Uses HTTP(S) protocol for easy firewall traversal
- Complements faxing from the desktop
- Easy to use with no learning curve
- Retains the familiar fax machine sending process that virtually eliminates support needs
- Supports reliable connections for fax machines, MFP's, and Digital Senders to VoIP Service Providers
- Offers secure faxing from fax machines over the internet

## Requirements for using the NET SatisFAXtion Fax Machine Client Plug-in with a VoIP Service Provider:

- Account with VoIP Service Provider
- Microsoft Windows Vista / XP / 2000
- Microsoft Windows 2003 Server / SBS
- Microsoft .NET 3.0 (automatically installed)
- VoIP service provider must be hosting a NET SatisFAXtion IP Port Server
- Compatible ATA or FXS device that supports SIP T.38

*The installation of the Fax Machine Client Plug-in is very easy with a simple "Browse" to find the installed compatible ATA device on the network. The ATA devices are typically setup with DHCP making the complete installation easy.*
