

Integrate FAX with Microsoft Office Applications

Seamless Office Integration

NET SatisFAXtion offers the tightest integration on the market today with its "Print-to-Fax" functionality. From within Office applications such as Word, Excel, PowerPoint and more, desktop users simply Print-to-Fax to send laser-quality fax documents effortlessly.

SENDING A FAX

1. Open the document you want to fax and simply print to the **FaxOut** printer to send the document as a fax.

2. The document is converted to a fax image and then a new Outlook e-mail message is automatically launched

3. Select a business contact within Outlook and send the message to deliver the fax.

In a few steps users can easily send faxes directly from popular Microsoft Office applications such as Word, Excel, PowerPoint and more.

Key Features/Benefits

Enables Simple Print-to-Fax Access from within Popular Office Applications

- Fax is fully integrated into the Print menu in any Office application.
- Right-click on files to fax.
- Allows you to fax while viewing the document.

Enables Universal Messaging with Fax and Email

- Fax and email messages are created and sent in the same easy step.
- Integrates directly with Outlook's contact manager allowing users to easily send faxes to any fax number stored in outlook.

Preview Documents Before Saving or Sending

- Review documents as they appear converted to a fax before they are sent.
- Save time by providing users with 100% confidence that the documents they are sending will appear exactly as the sender intended.

Preserves the Delivery Confidence Found with the Office Fax Machine

- Gives and users the same delivery confidence as if they were standing at the department fax machine watching the progress of their fax.
- Users know instantly the status of their sent faxes.
- Users receive a confirmation email each time a fax is sent.

Combine Documents from Different Office Applications

- Streamline your communications by combining charts created in Excel with content created in Microsoft Word.
